MAINTENANCE

- Clean your watch with a dry or dampened clothe.
- The watch must not come in contact with saltwater, any cleaning agents, chemicals etc.
- Keep the watch clear of strong magnetic fields. You could magnetize your watch inadvertently and cause erratic gear behavior.
- Avoid extreme temperatures. Moving between excessive cold and hot temperatures can damage the parts to expand or contract.
- Avoid contact with water. The specification of the water resistance is only accurate for the new watch, not being a permanent condition.
- This timepiece contains precision original parts. Only Pionier authorized specialized agents can open the case of the watch.
- Harmful and sharp objects and harsh surfaces will scratch your watch. 'Scratch resistant' does not mean, 'scratch proof'.

ATTENTION

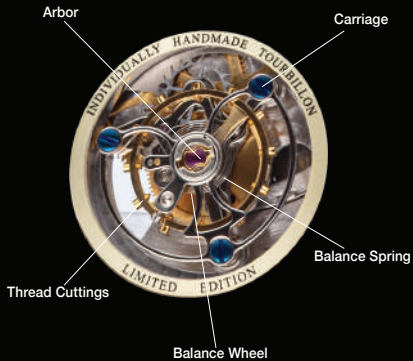

- If the watch is not worn for more than 42 hours, wind the watch in A position by turning the crown clockwise 30 times.
- Water resistant does not mean waterproof. Avoid swimming, showers or long periods in water while wearing this watch.
- In order to obtain an accurate time, the watch should be worn at least 6 hours a day.
- The accuracy of a mechanical automatic movement can not be compared with that of a quartz battery watch.
- Slight differences of +/- 20 seconds per day are normal.

USAGE

The most significant horological advancements since the invention of the lever escapement, the co-axial escapement functions with a system of three pallets that separate locking function from the impulse, avoiding the sliding friction of the lever escapement.

1. Crown at position 1 - Hand winding mode
Rotate the crown clockwise motion.
2. Crown at position 2 - Time setting mode
Pull crown to position 2 and move the hands in any direction to desirable time.
3. Sun & moon are running synchronously with home time.
4. Power reserve indicator
This feature marks how long your watch will run without needing to be wound.

QUALITY

The best German designs were used in the manufacturing of this masterpiece. Pionier uses only modern techniques and latest watchmaking machineries. There were only 51 Geneva Tourbillon ever made. This timepiece offers pure artisanal craftsmanship. A tourbillon is the most significant horological advancement.

WARRANTY

Pionier watches come with 24 months international warranty from date of purchase. Warranty covers any mechanical manufacturing defects under normal wear, and it does not cover tampering accidents, misuse or other damages by third party, no matter how they were caused. Not covered also band, case & glass.

DEPLOYMENT BUCKLE

Steps:

Open buckle upward.

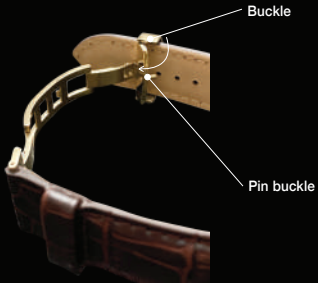

Put strap inside buckle.

Put buckle pin in desired hole.

Close buckle downward.

Enjoy your daily life with your new timepiece.
